

Aether Robotics

Inspection intelligence for industrial sites — from sensor run to engineering decision.

THE ROUND

€100,000

for 1% equity

Pre-money valuation	€9.9m
Post-money valuation	€10.0m

Investment requested: EUR 100,000

Equity offered: 1%

Pre-money: EUR 9,900,000

Inspection data is abundant. Decisions are still slow.

Engineering teams lose context between capture, review and remediation.

Today

- 01 Fragmented sensor exports
- 02 Manual anomaly triage
- 03 Reports arrive after the shift
- 04 No reusable site-level history

With Aether

Capture → **Review** → **Decide**

Robot-mounted sensors and review software combine each field run into a traceable decision package for engineering teams.

One workflow from site capture to verified action.

The system is designed around existing inspection teams, not a rip-and-replace program.

01

SENSE

Robot-mounted payload records thermal, visual and acoustic signals.

02

TRIAGE

Review software groups anomalies and keeps source evidence attached.

03

DECIDE

Engineers approve findings and export a concise remediation brief.

Early traction is paid, field-tested and specific.

The next milestone is repeatability across sites — not another lab prototype.

2

paid design partners

€180k

current pilot revenue

1

field-tested sensor payload

Current revenue: EUR 180,000 · Profit/Loss: loss-making · Two paid industrial design partners

Pilot revenue creates the path to recurring site programs.

Illustrative management plan; values are fictional and intended for evaluation testing.

€115k / month

current burn

€1.2m

projected annual revenue

Model

Paid deployment → recurring site program

€100k funds one focused validation sprint.

The round is deliberately scoped to evidence that unlocks the next financing decision.

1

0–30 days

HARDEN

Ruggedize payload and close field issues

2

31–60 days

REPEAT

Run two additional paid site workflows

3

61–90 days

PROVE

Publish repeatability and conversion metrics

A compact team, a precise milestone, a clear term.

Maya Chen

Co-founder & CEO · robotics systems

10+ years across autonomy, industrial deployment and customer discovery. Led multidisciplinary teams from prototype to field acceptance.

Lukas Weber

Co-founder & CTO · perception software

INVESTMENT REQUESTED

€100,000

for 1% equity

Pre-money €9.9m · Post-money €10.0m

Use of funds: payload hardening, two site runs and repeatability evidence.
